Best aa/aaa nimh battery charger

Top reviews Most recent Top reviews no need to look for AA batteries anymore you can use your AAA batteries insteadAttachmentsBrilliant Snaget.stlmount the screw and insert the batteriestest and gotransform your AAA batteries into AAParticipated in the Build a Tool Contest And the best and most advanced battery chargers in general Besides the great Eneloop chargers, here are the best AA, NiMH, and Lithium-Ion Analyzer chargers. Advanced battery chargers and analyzers have a few things in common. One is: They are used by people who want to "know their batteries better". The Best Rechargeable Battery Chargers? SKYRC MC3000 is currently the #1 best and most advanced battery charger on the planet Opus BT C3100 is the second-best advanced battery charger/analyzer (affordable) SkyRC NC2600 is the best dedicated NiMH and NiCD rechargeable battery charger Opus BT C700 is the 3rd best dedicated NiMH/NiCD charger SkyRC MC3000 (Multi-Chemistry charger for Lithium Ion, Li-Po, NiMH, NiCad etc) My most used charger! The first on the list is the SkyRC MC3000 that is the most advanced charger for round batteries and the best at it! It can handle many kinds of battery chemistries including NiMH, NiCD Lithium-Ion, Lilo (4.35V), LiFePO4, NiZn and more. At the same time this is also the most expensive analyzer of the bunch. With a maximum of 3A charge current for 4 slots its also the most powerful charger for cylindrical batteries currently available. It was officially announced in 2014 but didn`t make it to public availability till about a year later. SkyRC MC3000 Pros Multi-chemistry charger that is a One-fits-all solution Smartphone APP with bluetooth connection to set settings via a graphical user interface PC connect: this lets you plot graphs to test batteries Firmware and software updates. If there is ever a new chemistry the updates will let you receive the correct setting to charge the battery Full Manual control: Charge rate, rest time, discharge rate, cut off voltage etc SkyRC MC3000 Cons The price. Not suited for non-tech-savy people No graphical user interface, just timple names and numbers. Battery sliders are mentioned to be pretty stiff The size of the charger is a bit on the large size Please note that the Pros and Cons mentioned above do not fit all users. For a full review of the MC3000 refer to HKJ`s test. Or if you are up to reading all details see Kreisl`s thread at CPF Opus BT C3100 (Multi-Chemistry charger for Lithium-Ion, NiMH, NiCad etc) The second on the list is the Opus BT C3100. Great charger, but I replaced mine with the more expensive SkyRC. Also sold under different names, like Opus BT-C3400, Powerfocus BT-C3100, Voltcraft IPC-3, and a few other names, like "BT-C3100" without the Opus brand name. For now, I will keep it as the BT C3100. The 3100 can be had for less than half the price of the SkyRC MC3000, but still has a lot to offer. It can charge Lithium-ion batteries in different sizes, from 16340 up to 20700, as well as AA and AAA rechargeable batteries. It even has a hidden switch to charge at 4.35V for certain lithium batteries. This is the charger that I am currently using as a backup for the SkyRC mc3000. My Voltcraft charger broke on me, and my Powerex C9000 I gave to my brother. It has a display that shows the numbers for each bay separately. It also includes a Refresh mode, which is "exercising" NiMH batteries to bring them closer to their full capacity. Opus BT-C3100 Pros Price A multi-chemistry charger that is a One-fits-all solution Can Analyze your batteries with capacity readings, which is great for checking battery quality Can test internal resistance, but not very accurate Manual control: Charge rate, discharge rate Opus BT-C3100 Cons No Software updates like the SkyRC MC3000 No PC link to track and plot graphs of the batteries It may not be suited for non-tech-savvy people The size of the charger is a bit on the large size For using Lithium-Ion batteries at full charge rate you might have to upgrade the provided power adapter Please note that the Pros and Cons mentioned above do not fit all users of course. For a full review see Opus BTC3100 2.1V by HKJ. (Cheap Multi-Chemistry Charger for Lithium-Ion, NiMH, NiCad, etc) The third on the list is the Littokala engineer Lii-500 charger analyzer. The charger comes with or without power adapters. So please be aware. This is a budget solution that will work with many chemistries, except LiFePO4. Littokala Lii-500 Pros Price: around $18 - $30 with or without poweradapter Multi-chemistry charger Can Analyze your batteries with capacity readings, which is great for checking battery quality Can test internal resistance, but not very accurate Manual control: Charge rate, discharge rate Littokala Lii-500 Cons No Software updates like the SkyRC MC3000 No PC link to track and plot graphs of the batteries Display shows info per channel, not all together at the same time separately May not suited for non-tech-savy people The size of the charger is a bit on the large size Please note that the Pros and Cons mentioned above do not fit all users. For a full review see Littokala engineer Lii-500 done by HKJ. (Most advanced, dedicated NiMH and NiCD battery charger and analyzer, not for lithium-Ion) This is basically the same charger as the SkyRC MC3000 but for Non-lithium users. It focuses on NiMH and NiCD batteries. The NC2600 by itself is again a successor of the NC2500. The first on this list is the SkyRC NC2600 which is the most advanced NiMH and Nicad charger for round batteries, just like its brother is for all chemistries. With its bluetooth connectivity it can be seen as the father of all NiMH chargers. SkyRC NC2600 Pros The most advanced Smartphone APP with bluetooth connection to set settings via a graphical user interface PC connect: this lets you plot graphs to test batteries Firmware and software updates. If there is ever a new chemistry the updates will let you receive the correct setting to charge the battery Full Manual control: Charge rate, rest time, discharge rate, cut off voltage etc SkyRC NC2600 Cons The price. Not suited for non-tech-savy people Please note that the Pros and Cons mentioned above do not fit all users. Or check the full review by HKJ. (Dedicated NiMH and NiCd charger, not for lithium-ion) This has been the leading battery analyzer for the past 10+ years. Before the multi chemistry chargers like the ones above became available the Powerex MH C9000 was the go-to charger. It still has a lot to offer, and therefore worthy to take into consideration. It can charge and Analyze 1-4 AA or AAA batteries in separate slots. You can set the desired charge or discharge rate as well as Maha Powerex MH-C9000 Pros One of the most used AA and AAA analyzers on the market. 12V input and therefore is able to use in a car Can Analyze your batteries with capacity readings, which is great for checking battery quality Break-in mode, to push the battery to its top Manual control: Charge rate, discharge rate etc Maha Powerex MH-C9000 Cons Uses a trickle charge. You should take out the batteries when done Price: $50-$70 Only displays one battery at a time No Software updates like the SkyRC MC3000 No PC link to track and plot graphs of the batteries May not suited for non-tech-savy people The size of the charger is a bit on the large size Please note that the Pros and Cons mentioned above do not fit all users of course. For a review see Powerex MH C9000 by HKJ. (Advanced charger for NiMH and NiCD batteries alone, not for Lithium-Ion) The BT C700 is a sibling of the BT C3100 which can charge many chemistries. This Opus BT C700 is focused on NiMH and NiCD only. Besides the very moderate price, according to HKJs review, its a good charger. It has 4 separate bays with individual info on the display. It also includes a Refresh mode besides the usual charge and discharge modes. The Quick Test mode which is checking the internal resistance and the Test mode for the Capacity. Opus BT C700 Pros Compact sized Price Can Analyze your batteries with capacity readings Can Refresh batteries for improving capacity Manual control: Charge rate, discharge rate etc Opus BT C700 Cons No Software updates like the SkyRC MC3000 No PC link to track and plot graphs of the batteries May not suited for non-tech-savy people The Pros and Cons mentioned above do not fit everybody. For a review see Opus BT C700 test by HKJ. Do not make the mistake that the Opus BT C700 is the same as the La crosse/Technoline/Voltcraft. The above mentioned Opus charger is completely different. I got 1 Voltcraft LPC1 (or something like that) as my first analyzer. The buttons were a little hard to push and after about 2 years some buttons just stopped working altogether. TIP! a reader told me this can be resolved by cleaning the contact points of these buttons. But there are enough people that like this charger. Depending on the model you get, you can set the charge rate till 700mA per battery. (and 1000mA for the C1000 model) It has 4 individual channels with display info. It also includes a Refresh mode besides the usual charge and discharge modes. They can be nice chargers if you don`t use Lithium ion batteries.
